Art Unit: 1631

Claims 1-8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the response filed December 12, 2003.

The drawings are objected to because the separate pages of Figure 5 are numbered improperly. Instead of being numbered as Figure 5, 5A, 5B, and 5C, the separate pages of Figure 5 should be labeled as Figure 5A, 5B, 5C, and 5D. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance. See MPEP 608.02(e).

The disclosure is objected to because of the following informalities.

- (a) The discussion of Figure 5 (paragraph 0022) must refer to the separate sections of the figure (*i.e.* 5A-5d) specifically.

Appropriate correction is required.

The incorporation of essential material in the specification by reference to a foreign application or patent, or to a publication is improper. Applicant is required to amend the disclosure to include the material incorporated by reference. The amendment must be accompanied by an affidavit or declaration executed by the applicant, or a practitioner representing the applicant, stating that the amendatory material consists of the same material incorporated by reference in the referencing application. See *In re Hawkins*, 486 F.2d 569, 179 USPQ 157 (CCPA 1973); *In re Hawkins*, 486 F.2d 579, 179 USPQ 163 (CCPA 1973); and *In re Hawkins*, 486 F.2d 577, 179 USPQ 167 (CCPA 1973).

The attempt to incorporate subject matter into this application by reference to "AADM schema" (*e.g.*, see claim 20 and paragraph 0008) is improper because the AADM schema is essential subject matter. See MPEP 608.01(p).

Art Unit: 1631

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 9, 10, and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are vague, indefinite, and incomplete.

- (a) Claims 9 and 10 are incomplete because they depend from non-elected claim 1.
- (b) The recitation of "COM server" (claim 15) is vague, indefinite, and incomplete because the term is not defined in the specification.
- (c) Claim 20 is incomplete because it contains an improper incorporation by reference. See the objection hereinabove in relation to "AADM schema."

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 41 and 42 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Alon et al (Proc. Natl. Acad. Sci. USA 96: 6745 (June 8, 1999)). The claims are so broad as to embrace the systems disclosed in Alon et al (*e.g.*, see the Material and Methods section of the reference).

Art Unit: 1631

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 9-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alon et al (Proc. Natl. Acad. Sci. USA 96: 6745 (June 8, 1999)) in view of applicants' admitted state of the prior art (*e.g.*, paragraphs 0032-0055). Alon et al teaches methods for analyzing oligonucleotides array hybridization data from biological experiments (*e.g.*, see Abstract and Discussion sections). Applicants acknowledge the hardware and laboratory management systems to be old (*e.g.*, paragraphs 0032-0055 of the instant application). It would have been obvious for one of ordinary skill in the art at the time the invention was made to use the admittedly old software and hardware to analyzed biological experiment data in the manner of Alon et al and for the purposes set forth in Alon et al.
